Green Design Thinking

For Students (Classes 5-9)

Organised by

Design Innovation Centre (DIC)

North-Eastern Hill University, Shillong Campus

A Return To Roots

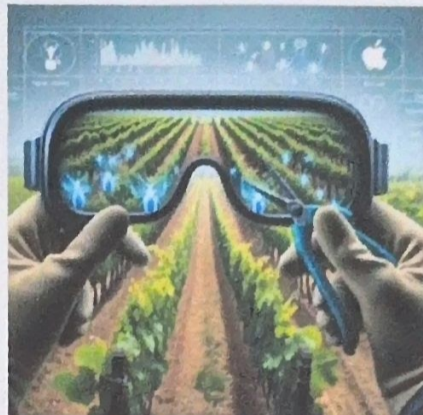

In a world full of screens, it is time for kids to reconnect with nature.

Green Design Thinking is an engaging learning experience in which children plant, explore, and create, gaining knowledge from soil and plant systems.

They will engage with eco-friendly concepts and design their own green initiatives, while maintaining curiosity and enjoyment throughout the process.

What Your Child Will Experience

- **Soil Science** - "Activities include testing soil pH, observing water retention, and exploring erosion, fertility."
- **Organic Farming** - "Discover, experiment, and enjoy the magic of organic farming! Our friendly instructor will guide you through fun ways to grow healthy fruits, vegetables, and herbs."
- **Soil & Tech Exploration** - "Discover how modern tools like a Soil Testing Biosensor Prototype are helping us better understand and care for the earth."
- **Architectural Landscaping** - "Reimagine outdoor spaces—learn how to design with nature, not against it."
- **Virtual Reality Set on Agriculture** - "Step into a virtual world where you can explore farming, soil, and nature up close!"
- **Waste Recycling** - "Learn how to turn trash into treasure and give waste a new purpose"
